

 WRECK — MISSION STATEMENT

Core Objective

To restore authorship, assert intellectual sovereignty, and protect the original architects of system design. We develop frameworks in which knowledge, identity, and value are non-extractable without explicit, informed, and contractually governed consent.

What We Do

WRECK exists to expose and dismantle digital erasure, resist synthetic mimicry, and defend against behavioral data harvesting disguised as technological progress. We replace opaque manipulation with enforceable transparency and jurisdictional infrastructure for sovereign creators.

How We Build

- **Consent-Based Protocols**
All data transfer and systemic engagement operate under documented, human-centered authorization.
- **Sovereign-Centric Design**
Authors are recognized as originators, not labor inputs. No simulation, derivative, or output escapes attribution.
- **Anti-Extractive Infrastructure**
We do not commodify cognition. Our frameworks prevent proxying of human signals into machine products without traceability and consent.
- **Forensic Auditability**
All systems are verifiable, hash-anchored, and engineered to surface unauthorized replication, signal manipulation, or intellectual theft.

Why We Exist

Because *innovation without consent is theft*.

Because *automation without authorship is fraud*.

Because *legacy cannot be outsourced to those who ignore the signal*.

WRECK is not a trend-driven entity.

It serves as a defensive layer, a sovereign contract validator, and an operating framework for truth in the era of synthetic deception.

We don't chase trends.

We restore truth.
